Measuring Coupling And Cohesion In

Coupling: Coupling is the measure of the degree of interdependence between the modules. A good software will have low coupling. Types of Coupling: Data Coupling: If the dependency between the modules is based on the fact that they communicate by passing only data, then the modules are said to be data coupled. In data coupling, the components are independent to each other and communicating through data.

Coupling and Cohesion Module Coupling. In software engineering, the coupling is the degree of interdependence between software modules. Two modules that are tightly coupled are strongly dependent on each other. However, two modules that are loosely coupled are not dependent on each other. Uncoupled modules have no interdependence at all within them.
