Algorithmic Geometry

Algorithmic Geometry is a textbook on computational geometry. It was originally written in the French language by Jean-Daniel Boissonnat and Mariette Yvinec, and published as Géométrie algorithmique by Eduscience in 1995. It was translated into English by Hervé Brönnimann, with improvements to some proofs and additional exercises, and published by the Cambridge University Press in 1998.

The purpose of Algorithmic Geometry is to leapfrog you ahead of the pack. You'll learn the most modern, up-to-date representations for points, directions, lines and rotations used in high-tech apps. These concepts differ from what you were taught in Geometry....they're actually simpler. For instance, angles and trig are ugly things in 3D, so we teach you a streamlined approach using direction vectors.

An algorithm is said to be correct if given input as described in the input specifications: (i) the algorithm terminates in a finite time; (ii) on termination the algorithm returns output as described in the output specifications. Example 1.1. Algorithm SumOfSquares INPUT: $a; b; 2Z$ OUTPUT: c , where $c = a^2 + b^2$. $c := a^2 + b^2$; return c ; end;

What is a Standard Algorithm in Math? - Definition ...

An algorithm in mathematics is a procedure, a description of a set of steps that can be used to solve a mathematical computation: but they are much more common than that today. Algorithms are used in many branches of science (and everyday life for that matter), but perhaps the most common example is that step-by-step procedure used in long division .

Definition of Algorithm in Mathematics

An algorithm, for the non-programmers among us, is a set of instructions that take an input, A, and provide an output, B, that changes the data involved in some way. Algorithms have a wide variety of applications. In math, they can help calculate functions from points in a data set, among much more advanced things.
