Water Transmission And Distribution

Water transmission and distribution On average up to 25-30% of a utility's water is lost in the network to leakage and other types of non-revenue water, according to the World Bank. These losses cost water companies vast amounts of money, not only in lost revenues but in the cost of treating and pumping water that leaks into the ground.

Transmission and distribution are terms used commonly in connection with electricity. It is not just production that is important but how efficiently it is transmitted from the power plant to power sub stations and then finally to end consumers that makes up the entire system of generation to consumption. People commonly confuse between transmission and distribution and believe them to be synonyms but these terms are as different as chalk and cheese.
