The purpose of a gasoline car engine is to convert gasoline into motion so that your car can move. Currently the easiest way to create motion from gasoline is to burn the gasoline inside an engine. Therefore, a car engine is an internal combustion engine — combustion takes place internally. Two things to note:

### **How Car Engines Work | HowStuffWorks**

The engine is the heart of your car. It is a complex machine built to convert heat from burning gas into the force that

turns the road wheels. The chain of reactions which achieve that objective is set in motion by a spark , which ignites a mixture of petrol vapour and compressed air inside a momentarily sealed cylinder and causes it to burn rapidly.

### **The engine | How a Car Works**

The basic operation of the car engine is pretty darn simple. Whether SI or CI the process that creates the power to drive the pistons involves multiple steps. These steps are; intake, compression, combustion, and exhaust. Sounds simple enough on the surface but let's drill down a bit more to see what is really going on:
