Biophysical models have been used in biology for decades, but they have been limited in scope and size. In this book, Bernhard Ø. Palsson shows how network reconstructions that are based on genomic and bibliomic data, and take the form of established stoichiometric matrices, can be converted into dynamic models using metabolomic and fluxomic data.

The sequencing of actions, input/output and message flow, and state changes, are often difficult to understand solely by reviewing static representations. Animating various diagrams during the execution of a dynamic system model representing the system behavior can significantly enhance user understanding. A simple simulation can either rely on execution of pre-scripted scenarios, or it can react to specific user interaction (e.g., “toggle this input and see what happens”).
