Spatial data consist of empirical (multivariate) attribute values associated with geographical coordinates. While global outliers are data points that are relocated away from the bulk of the data in the multivariate space, local outliers differ in their non-spatial attributes from observations within a locally restricted neighbourhood (Filzmoser et al. 2014).

Multivariate Outlier Detection in Applied Data Analysis ...

Generalised Canonical Analysis or GCA is a multivariate data analysis technique that studies the relationship between sets of variables. In sensory research, data often consist of sets of variables, consequently it is worthwhile taking a closer look at GCA. In the GCA model the sets may contain the same variables but also different variables.
