Structure and function of DNA? - Answers

DNA Function, Structure and Replication. In this analysis and discussion activity, students learn how the genes in DNA give the

instructions to make proteins which influence our characteristics. Different versions of a gene can give the instructions to make different versions of a protein, which can result in different characteristics. Many different proteins are needed for a cell to be alive, so each cell needs a complete copy of the DNA with all of the genes.

DNA Function, Structure and Replication | Serendip Studio

Describe the structure and complementary base pairing of DNA. DNA has two strands in anti-parallel orientation. The sugar-phosphate linkages form a backbone on the outside, and the bases are paired on the inside: A with T, and G with C, like rungs on a spiral ladder.
