### Recurrence Plot And Other Time

In descriptive statistics and chaos theory, a recurrence plot (RP) is a plot showing, for each moment  $i$  in time, the times at which a phase space trajectory visits roughly the same area in the phase space as at time  $j$ . In other words, it is a graph of  $\rightarrow \approx \rightarrow ()$ , showing on a horizontal axis and on a vertical axis, where  $\rightarrow$  is a phase space trajectory.

The interweaving stories in Recurrence Plot and Other Time Travel Tales present characters whose stories challenge the notion that time flows in only one direction. If you want to understand what is happening at any given point in time, you cannot only look to the past for clues. You must consider the future.

Figure 1 shows the recurrence plot from the Rossler  $x$  variable, for a time delay  $d = 14$  (selected through the method of average mutual information) and an embedding dimension  $m = 4$  (selected through the false nearest neighbours method). Figure 2 shows the recurrence plot from a Gaussian white noise, for  $d = 1$  and  $m = 12$ .

Definition. Recurrence plot – A recurrence plot (RP) is an advanced technique of nonlinear data analysis. It is a visualisation (or a graph) of a square matrix, in which the matrix

elements correspond to those times at which a state of a dynamical system recurs (columns and rows correspond then to a certain pair of times).

### RECURRENCE PLOTS::Recurrence Plots At A Glance

Recurrence is a fundamental property of dynamical systems, which can be exploited to characterise the system's behaviour in phase space. A powerful tool for their visualisation and analysis called recurrence plot was introduced in the late 1980's. This report is a comprehensive overview covering recurrence based methods and their applications with an emphasis on recent developments.

### Recurrence plots for the analysis of complex systems ...

I am trying to solve a recurrence plot of a time series but with this condition: the y-axis represents the relative time distances to the next recurrence points but not their absolute time. I found this code online and used it in the Lorenz System for  $X$  only. However, it doesn't satisfy the condition stated above.

### python - Recurrence Plot - Stack Overflow

Recurrence plot based methods (e.g. recurrence quantification analysis) are modern methods of nonlinear data analysis. Here we provide information about recurrence plots, cross and joint recurrence plots as well as their quantification (recurrence quantification analysis, RQA).

### RECURRENCE PLOTS::Recurrence Plots, Cross Recurrence Plots ...

Abstract. Recovering information about the periodic behavior of a non-stationary signal typically requires a large data set and extensive off-line analysis. Alternatively, we've modified Eckmann, Kamphorst and Ruelle's idea of a recurrence plot, which they defined to appreciate the dynamics of a time series without either of these constraints.

### **THE AFROFUTURIST AFFAIR**

After a brief outline of the theory of recurrences, the basic idea of the recurrence plot with its variations is presented. This includes the quantification of recurrence plots, like the recurrence quantification analysis, which is highly effective to detect, e.g., transitions in the dynamics of systems from time series.
