Rock Shox Rear Air Pressure

For the rear shock, start at about half of your rider weight for air pressure. You will have to adjust from here, but you will want to achieve the proper SAG for your frame, as recommended by your frame manufacturer. Typically this is somewhere between 30-40% of overall travel. Check out this tutorial video for SAG setting and tuning.

I currently own a newly bought 2010 Rock Shox Revelation Team Dual Air. I love the fork for its simplicity and function. Unfortunately, I have been experiencing some trouble with the negative air pressure leaking.

Fork problem: Leaking Negative Air Pressue- Mtbr.com

3. Coil or air? We've listed air and coil shocks here but air shocks are what most bikes are designed around and the best choice for most riders too. They're lighter (by 200-400g) and easy to adjust for different rider weights and spring

rates just by changing air pressure and volume.

Best rear shocks for mountain bikes | Bike Perfect

For the SID rear shock you will be changing the air spring rate to set sag. Adjusting main chamber air pressure determines the spring rate, or stiffness, of the shock. The more air you put in, the firmer your shock will be. Maintain air pressure between 100 and 250 psi.

Senateallstar on Pinkbike

RockShox is one of the market leaders when it comes to suspension, having provided front forks and rear shocks to mountain bikers for almost 30 years. RockShox released the first-ever mountain bike suspension fork , in 1990, called the RS-1 — it had two-inches of travel and was essentially a downsized motocross fork.
