Working of Automatic Railway Gate Controller. In this circuit we have used ultrasonic sensors and servo motors to replicate the working of a railway crossing. Both the sensors are triggered with the help of trigger pins attached to Arduino board and distance is calculated. Further working of the circuit completely depends upon the distance measured.

Automatic railway gate using microcontroller. This project is an attempt to build a model of automatic railway gate using simple components such as microcontrollers, reflective type IR sensor, motor driver IC and a motor. It is based on the working of IR sensors (how do IR sensors work?). As in reflective type IR sensors no IR rays are detected by the

receiver when there is no object (obstruction).
