The optic nerve is considered a cranial nerve but it is generally affected in a disease of the central nervous system known as multiple sclerosis, and, for this and other reasons, it is thought to represent an extension of the central nervous system apparatus that controls vision. In fact, doctors can diagnose inflammation of the head of the optic nerve by using an ophthalmoscope, as if the person's eyes were a window into the central nervous system.

#### What Is Central Nervous System? Definition, Function & Parts

Neurological investigations are done in concert with queries into other body systems. Especially important: Vitals: pulse (especially rhythm), BP, temperature. Head and neck: meningismus, bruises/injuries to head. Cardiac: bruits and murmurs. There can be clues to help decipher the cause of neurological symptoms.

#### Nervous System Investigations - Sharing In Health

The central nervous system (CNS) functions as the processing center for the nervous system. It receives information from and sends information to the peripheral nervous system. The brain processes and interprets sensory information sent from the spinal cord. Both the brain and spinal cord are protected by a three-layered covering of connective tissue called the meninges. Within the central nervous system is a system of hollow cavities called ventricles.

The central nervous system is the part of the nervous system consisting primarily of the brain and spinal cord. The CNS is so named because it integrates the received information and coordinates and influences the activity of all parts of the bodies of bilaterally symmetric animals—i.e., all multicellular animals except sponges and radially symmetric animals such as jellyfish—and it contains the majority of the nervous system. The CNS also includes the retina and the optic nerve, as well ...
