Psychological Criminology *Taylor & Francis*

Psychological Criminology addresses the question: what is it about individuals and their experiences that cause them to commit crime and/or to become criminal? This book provides a comprehensive coverage of psychological theories of crime and criminality, exploring theories focusing on factors present at birth (human nature, heredity); theories that focus on factors that influence the offender over the lifespan (learning, development); and theories focusing on factors present at the crime scene. It emphasizes the connections among the different approaches, and demonstrates how, taken together rather than as rival explanations, they provide a more complete picture of crime and criminality than each provides individually. Theories are arranged throughout the book in a temporal sequence, from distal to proximal causes of crime. The analysis spans 100,000 years, from the evolutionary roots of criminal behaviour in the ancestral environments of early humans on the African savana, to the decision to engage in a specific criminal act. Key features of the book include: a focus on theory – ‘explaining’ crime and criminality, an integrative approach, accessible to readers who do not have a background in psychology. Psychological Criminology highlights the contributions that psychological theory can make to the broader field of criminology; it will be of interest to students, academics, researchers and practitioners in both criminology and forensic psychology.

Honor Related Violence *Routledge*

Honor related violence is generally associated with crimes committed by people from the Middle East and adjacent areas. Perpetrators sometimes justify their deeds saying they 'had to' restore their honor. Theorists have argued that men from these populations exclusively correlate honor with the behaviour of their womenfolk, which they use as a pretext to further oppress and dominate women. Due to large-scale migration, western societies have become acquainted with honor related violence and honor killings. In this book, Robert Ermers addresses a number of questions related to honor related violence, including the use of predominantly negative frames regarding the cultural and social background of non-westerners and immigrants. In many publications, including the press, crimes committed by non-western individuals are often attributed to their cultural background rather than specific contexts or circumstances, in contrast to western cases. Vague and insufficiently defined concepts such as 'honor' and 'culture' strongly contribute to this bias. Honor Related Violence deals with honor and honor related violence, their background and contexts, what honor is, and what it is not. It examines stigma in relation to honor and based upon stigma research, reliably explains, analyses, and predicts honor related violence. The book argues that people all over the world can be stigmatized, excluded and ostracized when they commit misbehavior, and therefore find themselves in a state of dishonor which can lead to honor related violence. A timely intervention into the psychology of honor related violence, this is an essential resource for students and researchers in the fields of social psychology, sociology, law, criminology and anthropology.

Juvenile Crime, Juvenile Justice *National Academies Press*

Even though youth crime rates have fallen since the mid-1990s, public fear and political rhetoric over the issue have heightened. The Columbine shootings and other sensational incidents add to the furor. Often overlooked are the underlying problems of child poverty, social disadvantage, and the pitfalls inherent to adolescent decisionmaking that contribute to youth crime. From a policy standpoint, adolescent offenders are caught in the crossfire between nurturance of youth and punishment of criminals, between rehabilitation and "get tough" pronouncements. In the midst of this emotional debate, the National Research Council's Panel on Juvenile Crime steps forward with an authoritative review of the best available data and analysis. Juvenile Crime, Juvenile Justice presents recommendations for addressing the many aspects of America's youth crime problem. This timely release discusses patterns and trends in crimes by children and adolescents--trends revealed by arrest data, victim reports, and other sources; youth crime within general crime; and race and sex disparities. The book explores desistance--the probability that delinquency or criminal activities decrease with age--and evaluates different approaches to predicting future crime rates. Why do young people turn to delinquency? Juvenile Crime, Juvenile Justice presents what we know and what we urgently need to find out about contributing factors, ranging from prenatal care, differences in temperament, and family influences to the role of peer relationships, the impact of the school policies toward delinquency, and the broader influences of the neighborhood and community. Equally important, this book examines a range of solutions: Prevention and intervention efforts directed to individuals, peer groups, and families, as well as day care-, school- and community-based initiatives. Intervention within the juvenile justice system. Role of the police. Processing and detention of youth offenders. Transferring youths to the adult judicial system. Residential placement of juveniles. The book includes background on the American juvenile court system, useful comparisons with the juvenile justice systems of other nations, and other important information for assessing this problem.
