the solution is $u(x) = a + bx$. The boundary condition $u(0) = 0$ means that $a = 0$, but the boundary condition $u(L) = 0$ then means that $b = 0$, whence $u(x) = 0$ for all x . Clearly this is a very uninteresting solution. Let us consider λ , imaginary. Then the solution is now $a \exp(j\lambda x) + b \exp(-j\lambda x)$. Again the boundary conditions force $a = b = 0$. Therefore we are left with

The finite element method (FEM) (its practical application often known as finite element analysis (FEA)) is a numerical technique for finding approximate solutions of partial differential equations (PDE) as well as of integral equations. The solution approach is based either on eliminating the differential equation completely (steady state problems), or rendering the PDE into an approximating system of ordinary differential equations, which are then numerically integrated using standard ...
