Abstract. In this study, morphometric analysis of 14 hilly sub-watersheds (SWs) of Naula watershed located in upper Ramganga River basin, Uttarakhand State, India, was done using remote sensing (RS) and geographical information system (GIS). The morphometric parameters used for sub-watersheds prioritization were watershed area, perimeter, stream order, mean stream length, basin length, bifurcation ratio, drainage density, stream frequency, texture ratio, mean length of overland flow, form ...

Morphological parameters have been recurrently used to assess the hydrological response of a watershed. Due to a strong mutual correlation between the run-off

characteristics and the terrain of a watershed, the method is significantly popular, especially in an un-gauged catchment. In the present study, the

hydrologic response of a Himalayan watershed and its sub-watersheds is discussed using various morphological parameters, and accordingly, the sub-watershed prioritization has been done.
