The study of the effect of radiation on polymer materials is an area of rapidly increasing interest (1-3). The radiation regimes of primary utility are either high energy, ionizing radiation such as from gamma or neutron sources, or ultraviolet radiation from arc lamps, excimer lasers or synchrotron sources. The major

Radiation Effects on Polymeric Materials

Description. The Effect of Radiation on Properties of Polymers examines the effects of radiation on plastics and elastomers. Polymers are required in products or parts for a range of cutting-edge applications that are exposed to radiation, in areas such as space, medicine, and radiation processing. This book focuses on the effects of radiation exposure within that environment, providing in-depth data coverage organized by category of polymer.

The primary goal of this CRP is to investigate radiation effects on polymer materials commonly used in medical devices by comparing gamma, e-beam, and X-ray irradiation. Specific research objectives This CRP will focus on polymers commonly used in the medical industry, such as low-density polyethylene, polypropylene, poly (ether-block-amide) thermoplastic elastomers, polytetrafluoroethylene ...

New CRP: Radiation Effects on Polymer Materials Commonly ...

The temperature of materials exposed to solar radiation has a relevant influence on the effect of the radiation. The destructive effects of light are usually

accelerated at elevated temperatures as a result of the increased rate of secondary reactions, with reaction rates about doubling with each 10 °C rise; this may not be true of all materials but is often found with polymers.
