Water is called the “universal solvent” because it dissolves more substances than any other liquid. This means that wherever water goes, either through the ground or through our bodies, it takes along valuable chemicals, minerals, and nutrients. Water, the liquid commonly used for cleaning, has a property called surface tension. In the body of the water, each molecule is surrounded and attracted by other water molecules.

Scientifically speaking, water is a cool molecule to study. Water is a polar molecule. Even though water is a neutral molecule in that it has an equal number of protons and electrons, there is an uneven electron distribution within each water molecule that makes it polar.

STATION 3 -Water has the properties of adhesion and cohesion. A single water molecule may be involved in as many as four hydrogen bonds at the same time. The ability of water to form multiple hydrogen bonds is responsible for many of water’s properties. Cohesion is an attraction between molecules of the same substance.
