Social Learning In Animals The

Social learning refers to learning that is facilitated by observation of, or interaction with, another animal or its products. Social learning has been observed in a variety of animal taxa, such as insects, fish, birds, reptiles, amphibians and mammals. Social learning is fundamentally different from individual learning, or asocial learning, which involves learning the appropriate responses to an environment

through experience and trial and error. Though asocial learning may result in the acquis

What is Social Learning (And How to Adopt it)

Individual learning refers to the animal acquiring new behavior by the trial-and-error processes of associative learning, that is learning by its own experience. In contrast, the contemporary understanding of social learning is that the animal attains new behavior after observing a conspecific performing the behavior (1).
