Some suggestions are reported in order to prevent or lower the degree and the incidence of major complications, specifically mucositis-related symptoms like stomatitis, diarrhea, cystitis.

Possibly, a multicenter effort is to be made in order to optimize the quality of supportive care for irradiated patients in all radiation therapy centers. PMID:

Supportive care in radiotherapy: a review.

Whether or not radiotherapy represents overtreatment in patients with adverse prognostic features is currently being addressed in the randomized QUARTZ trial (best supportive care (BSC) vs. whole brain radiotherapy (WBRT)).

However, inclusion is limited to patients with primary non-small cell lung cancer.

Radiotherapy versus best supportive care in patients with ...

The QUARTZ trial is the sole adequately powered RCT specifically addressing the efficacy of supportive care plus WBRT compared with supportive care alone in patients with NSCLC. The data from the whole trial population suggest that WBRT can be omitted and patients treated with OSC alone, without an important reduction in either overall survival or quality of life.
