Solid Rocket Propulsion Technology

This chapter presents an overview of the propulsion elements for solid rocket motors. A rocket motor is designed to ensure that combustion occurs under pressure of the propellant grain it contains. The resulting gases are expanded through a nozzle, whose function is to convert this pressure into supersonic exhaust.

Solid Rocket Propulsion Technology | ScienceDirect

A solid-propellant rocket or solid rocket is a rocket with a rocket engine that uses solid propellants (fuel / oxidizer). The earliest rockets were solid-fuel rockets powered by gunpowder; they were used in warfare by the Chinese, Indians, Mongols and Persians, as early as the

13th century.
