Pathogens are defined as everything that does not belong to our body, from parasites to fungi, bacteria, viruses, and haptens. Haptens are molecules that may cause an immune response when comes in contact with a protein.

**Immunology- An Overview of Immune System, its Types, Disorders**

The Microbiology, Microbial Pathogenesis and Immunology specialization concentrates on the study of host-pathogen interactions at the molecular and cellular levels. Faculty research programs focus on how microorganisms interact with surfaces, how they survive inside and outside of their hosts,

how signals are relayed between the microorganism and the host, and how the host responds to these signals.

Host-Pathogen Population Biology is an important stream of activity, which bridges from conventional immunology and pathogen research into systems-level quantitative biology. This field is rapidly growing, in the wake of demonstrating the interaction between, for example, vaccination and the emergence of pathogen virulence.

**Research topics | The University of Edinburgh**

In molecular microbiology, we look at how microRNAs regulate immune signalling and how pathogens manipulate these processes. Host-pathogen population biology integrates conventional immunology, pathogen research and systems-level quantitative biology, using mathematical approaches in both experimental models and the epidemiology of human and animal infections.
