The probable maximum loss under a given insurance contract is that proportion $[100(m+k)\%]$ of the limit of liability which with probability P is greater than or equal to any loss covered by the contract, where m is the mean or “expected” proportion of loss.

IS “PROBABLE MAXIMUM LOSS” (PML) A USEFUL CONCEPT?

Maximum probable flow – Maximum probable flow is the flow that will occur in the piping under peak conditions. It is NOT the total combined flow with all fixtures wide open at the same time, but is proportional to the number of fixtures that may be expected to be in use simultaneously. It is also called peak demand or maximum expected flow.

Probable maximum loss (PML) is a concept commonly used in property insurance. It refers to an estimate of the maximum losses an insurer can incur if the insured property is completely destroyed. Total losses can occur if something disastrous happens to a piece of real property, like a fire razing a building to the ground.

What is Probable Maximum Loss? - Definition from ...

Probable maximum loss (PML) is a term used in the insurance industry as well as commercial real estate. Although the definition is not consistent in the insurance industry, it is generally defined as the value of the largest loss that could result from a disaster, assuming the normal functioning of passive protective features (e.g. firewalls, nonflammable materials, flood defences etc.) and proper functioning of most (perhaps not all) active suppression systems (e.g. sprinklers).
