Chapter 11: Mendelian Patterns of Inheritance

Galtonian Patterns of Inheritance. Mendel's studies focused on dichotomous traits in plants, such as the color of peas (green or yellow) and plant size (tall or dwarf), but many traits have continuous distributions, such as height, weight, and intelligence. Galton was a contemporary of Mendel's who

studied the inheritance of continuous characteristics.

Difference Between Mendelian and Non Mendelian Inheritance ...

Non-Mendelian inheritance is any pattern of inheritance in which traits do not segregate in accordance with Mendel's laws. These laws describe the inheritance of traits linked to single genes on chromosomes in the nucleus. In Mendelian inheritance, each parent contributes one of two possible alleles for a trait. If the genotypes of both parents in a genetic cross are known, Mendel's laws can be ...
