Ion implantation: science and technology - Google Books

Ion implantation is a low-temperature process by which ions of one element are accelerated into a solid target, thereby changing the physical, chemical, or electrical properties of the target. Ion implantation is used in semiconductor device fabrication and in metal finishing, as well as in materials science research. The ions can alter the elemental composition of the target (if the ions differ in composition from the target) if they stop and remain in the target.

Ion implantation - Wikipedia

Ion beam technology including ion implantation and ion irradiation is an efficient tool to realize material modification. Ion implantation technology can achieve the precise doping of almost all elements compulsorily, while ion irradiation can manage defect engineering, morphology control, and so on with people's intentions.
