6 1 Construct Regular Polygons Geometry

Construct a regular hexagon if we know the radius of circumscribed circle. This is even easier. We just draw the circle c (O, r) and pick a starting point on it, let

it be point A . In regular hexagon, we know that the radius of circumscribed circle is equal to side of polygon, meaning $r = |AO| = |AB|$.

Constructing regular polygons - Free Math Worksheets

Step 1, Draw a straight line using the protractor. This will be the center line of your circle (dividing it into semi-circles). Step 2, Align the protractor so that both 0° and 180° lie on the center line. Mark the center point. Step 3, Trace the semicircle along the protractor from 0° to 180° .

In mathematics, a constructible polygon

is a regular polygon that can be constructed with compass and straightedge. For example, a regular pentagon is constructible with compass and straightedge while a regular heptagon is not. There are infinitely many constructible polygons, but only 31 with an odd number of sides are known.

The easiest regular
polygon to construct is
a hexagon. To
construct a hexagon,
use a compass to draw
a circle. Now, (keeping
the compass at the
same exact setting),
place the compass
point on the
circumference and
strike an arc on the
circumference. Next,

place the compass
point in the arc just
drawn and strike
another arc.

□A convex polygon in
which all of the sides
and all of the angles
are congruent is called
a regular polygon.

Name the polygon by
its number of sides.

Then classify it as
convex or concave,
regular or irregular.

There are 4 sides, so
this is a quadrilateral.

How to draw a polygon.

The correct described
triangle is constructed
as follows (Figure 38).

From the center of a
given circle of radius
R1 draw a circle with a
radius $R2 = 2R1$ and

divide it into three
equal parts. Division
points A, B, C are the

vertices of a regular
triangle circumscribed
around a circle of
radius R_1 .
