Software Defined Networking

Software-defined networking (SDN) technology is an approach to network management that enables dynamic, programmatically efficient network configuration in order to improve network performance and monitoring, making it more like cloud computing than traditional network management. SDN is meant to address the fact that the static architecture of traditional networks is decentralized and complex while current networks require more flexibility and easy troubleshooting.

Software-defined networking - Wikipedia

Software-defined networking (SDN) is an architecture that aims to make networks agile and flexible. The goal of SDN is to improve network control by enabling enterprises and service providers to respond quickly to changing business requirements. In a software-defined network, a network engineer or administrator can shape traffic from a centralized control console without having to touch individual switches in the network.

What is Software-Defined Networking (SDN)?

Software-defined networking (SDN) is an architecture designed to make a network more flexible and easier to manage. SDN centralizes management by abstracting the control plane from the data forwarding function in the discrete networking devices.

Software-Defined Networking (SDN) Definition - Cisco

What is Software Defined Networking? SDN is the long-awaited answer to the problems posed by complex and expensive networking environments. With a traditional network, each element - like a core switch or router - has to be configured

manually to do a certain task, which takes time and means relying on IT specialists.

What is Software Defined Networking (SDN)? | Vodafone UK

Software-Defined Networking (SDN) is an emerging architecture that is dynamic, manageable, cost-effective, and adaptable, making it ideal for the high-bandwidth, dynamic nature of today's applications. This architecture decouples the network control and forwarding functions enabling the network control to become directly programmable and the

Software-Defined Networking (SDN) Definition - Open ...

Software Defined Networking (SDN) is an architecture that gives networks more programmability and flexibility by separating the control plane from the data plane. The role of software defined networks in cloud computing lets users respond quickly to changes. SDN management makes network configuration more efficient and improves network performance and monitoring.

What is Software Defined Networking? Definition & FAQs

...

Software-defined networking (SDN) is a newly emerging computer networking architecture. Its main distinguishing factor is the separation of the data plane from the control plane in routers and switches. In other words, the control is decoupled from hardware and implemented in software.
