504 Quadratic Relations and Functions Procedure To solve a quadratic equation by factoring:
 1 If necessary, transform the equation into standard form
 2 Factor the quadratic expression
 3 Set each factor containing the variable equal to 0
 4 Solve each of the resulting equations
 5 Check by substituting each value of the variable in the original equation
 (5) Check both values

A quadratic is an expression of the form $ax^2 + bx + c$, where a , b and c are given numbers and $a \neq 0$. The standard form of a quadratic equation is an equation of the form $ax^2 + bx + c = 0$, where a , b and c are given numbers and $a \neq 0$. We seek to find the value(s) of which make the statement true, or to show that there are no such values.
