There have been annual workshops in Kyoto on string theory and quantum field theory for more than 20 years. Each year, around 150 participants gathered and there are around 40 short talks and 5 invited talks as well as poster sessions. This annual workshop is definitely one of the largest workshops of this field in Japan.

Strings and Fields

This is described in string theory as one string splitting into two. This process is an integral part of the theory. The mode on the original string also "splits" between its two parts, resulting in two strings which possibly have different modes, representing two different particles. Coupling constant: in quantum field theory this is, roughly, the probability for one particle to emit or absorb another particle, the latter typically being a gauge boson (a particle carrying a force).

The starting point for string theory is the idea that the point-like particles of quantum field theory can also be modeled as one-dimensional objects called strings. The interaction of strings is most straightforwardly defined by generalizing the perturbation theory used in ordinary quantum field theory.
