Page 2 of 6 pH and [H +] Calculations for Strong Acids and Bases By definition, strong acids and bases are 100% ionized in water solution. Ionization of a strong acid gives rise to H + ions, and ionization of a strong base produces OH - ions. The equilibrium constant for a strong acid or strong base is undefined, since the reaction the ionization is complete.

So, the pH = 2.64. The pH is slightly less acidic, because the concentration of H + in the more dilute system is lower. The percent ionization = ([H +] / [HF]) x 100 = { (2.3 x 10 -3)/ (0.010)}x 100 = 23.0%. Although the [H+] is lower, the percent ionization is much higher in the dilute acid.

During an acid-base titration, an acid with a known concentration (a standard solution) is slowly added to a base with an unknown concentration (or vice versa). A few drops of indicator solution are added to the base. The indicator will signal, by color change, when the base has been neutralized (when [H +] = [OH -]).
