Fluid Flow And Heat Transfer

An Introduction to Fluid Flow, Heat Transfer, and Mass Transport The subject of transport phenomena describes the transport of momentum, energy, and mass in the form of mathematical relations [1] . The basis for these descriptions is found in the laws for conservation of momentum, energy, and mass in combination with the constitutive relations that describe the

fluxes of the conserved quantities [2] .

The fluid flow and heat transfer performance of a wavy microchannel is studied, for the sake of illustrating the feasibility and effectiveness of the present idea. The wavy microchannel consists of 10 wavy units, with the four units in the middle being identical to the wavy units in the previous Section 3.1, with $\gamma = 0.075$. The first three units of the channel are identical to each other and their wavelength has been increased by 25% over that of the four units in the middle.
