Drug discovery and development is a knowledge-intensive process that implies the generation, management, and analysis of huge amounts of data from the initial target discovery research to the post-marketing pharmacovigilance studies, including central operations such as virtual screening and toxicological assessment.

Drug Development - an overview | ScienceDirect Topics

A variety of approaches is employed to identify chemical compounds that may be developed and marketed. The current state of the chemical and biological sciences required for pharmaceutical

development dictates that 5,000–10,000 chemical compounds must undergo laboratory screening for each new drug approved for use in humans. Of the 5,000–10,000 compounds that are screened, approximately 250 will enter preclinical testing, and 5 will enter clinical testing.
