Prose & Cons

A Collection of Prose & Poetry Following the Evolution of Love *Createspace Independent Publishing Platform*

Introduction -The phenomena that is

falling in love is a journey. Like all journeys, as love finds us, we also find ourselves. We are awakened to our dreams, our fears, our insecurities. Our eyes are opened to another reality where we are no longer alone and our actions don't solely affect us. There are things we must give up: control, fear, our past to name a few, and we have infinite things to gain. Love is like getting on a rollercoaster for the first time. The apprehension almost strong enough to make you think twice, but you get over that fear. You wait in line, you learn patience and how to calm your irrational fears. Then you are strapped in and a new wave of fear washes over you. Then it begins, and it is much too late to turn back. In that moment you wonder what the hell you were thinking. It starts, you

endure the ups and down, the twists and turns, the ugly feelings in your belly, and then it's over. You realize it wasn't so bad and that the experience made all that came with it worthwhile. This book is a collection of prose and poetry focused on the unique experience of falling in love. Though we will all experience love differently, I hope these words touch, heal, and encourages its readers to be fearless in the face of love.

Without?, and the novella Death's Door. Including a foreward by the author, the book is a compilation of some of his favourite quotes, quotes which have inspired him both as a writer and in every day life. With such a vast array of quotes included in the book, it is impossible not to identify with them, and find some inspiration amongst the pages.

The Cosmic Dust Connection *Springer Science & Business Media*

Solid particles are followed from their creation through their evolution in the Galaxy to their participation in the formation of solar systems like our own, these being now clearly deduced from observations by the Hubble Space Telescope as well as by IR and visual

observations of protostellar disks, like that of the famous Beta Pictoris object. The most recent observational, laboratory and theoretical methods are examined in detail. In our own solar system, studies of meteorites, comets and comet dust reveal many features that follow directly from the interstellar dust from which they formed. The properties of interstellar dust provide possible keys to its origin in comets and

asteroids and its ultimate origin in the early solar system. But this is a continuing story: what happens to the solid particles in space after they emerge from stellar sources has important scientific consequences since it ultimately bears on our own origins - the origins of solar systems and, especially, of our own earth and life in the universe.
