Overview. The AlphaSense CO-AF Carbon Monoxide Sensor provides an accurate and reliable way to measure up to

5,000 ppm CO by volume. The smart board and development kit converts the sensor's analog output current to a voltage that is measured by a high-resolution analog to digital converter. The digital voltage is corrected and compensated for temperature and pressure by a micro-controller to produce an accurate gas concentration measured in ppm (parts per million).

about 35 ppm, although it is also produced in normal animal metabolism in low quantities, and is thought to have some normal biological functions.
