A guy-wire, guy-line, or guy-rope, also known as simply a guy, is a tensioned cable designed to add stability to a free-standing structure. They are used commonly for ship masts, radio masts, wind turbines, utility poles, and tents. A thin vertical mast supported by guy wires is called a guyed mast. Structures that support antennas are frequently of a lattice construction and are called "towers". One end of the guy is attached to the structure, and the other is anchored to the ground at some dis

Guy-wire - Wikipedia

The installed tension for guy wire is typically 10% of the wire's breaking strength. Initial tension may be measured by vibration frequency, mechanical

tensionmeters, measurement of guy sag, or by other suitable methods. Direct and indirect are the two common methods of measuring guy tension on towers.

Towers/Installation - Guy Wire/Grips

Rohn specifies that guys should be tensioned to 10% of the breaking strength of the guy size that is recommended for a particular tower. One rule of thumb is 8% if the guy is out at 100% of tower height, 10% if at 80% of tower height (standard Rohn drawings) and up to 15% if the anchor point is at 65% of tower height.

maintaining acceptable guy-wire tension. The design must satisfy the following: It must install into an A203 tower. The guy-wire tension must be between 500 and 4,000 lb under no wind conditions. The guy wires must be able to resist leaning

and twisting of the tower. A detailed list of the design requirements is shown in Appendix B.
