Robust Smoothers For High Order

The multigrid method for discontinuous Galerkin (DG) discretizations of advection-diffusion problems is presented. It is based on a block Gauss-Seidel smoother with downwind ordering honoring the advection operator. The cell matrices of the DG scheme are inverted in this smoother in order to obtain robustness for higher order elements.

... are inverted in this smoother in order to obtain robustness for higher order elements. Employing a set of experiments, we show that this technique actually yields an efficient preconditioner and that both ingredients, downwind ordering and blocking of cell matrices are crucial for robustness. © 2007 Elsevier B.V. Then the smoothed process Z can be defined by the property that it minimizes $\text{ave} \{R(Ct - Z)\} + 2b \int_0^1 \text{ave} \{Z^2\} dt$. (1.4) $2b \int_0^1$ is a Lagrange multiplier, regulating the degree of 36 PETER J. HUBER smoothness.

Higher Order CRFs Higher order random fields are not new to computer vision. They have been frequently used to model image textures [18, 20, 24]. The initial work in this regard has been quite promising and higher order CRFs have been shown to improve results for problems such as image denoising and restoration [24], and texture segmentation [13].

The robust smoothing splines from `qsreg` function provides a default smoothing parameter selection method using pseudo-data, based on results in Cox (1983). The implementation is done via generalized cross validation (GCV) with empirical pseudo-data, and the reader is referred to Oh et al. (2004, 2007) for details.

We propose two nonlinear Kalman smoothers that rely on Student's t distributions. The T-Robust smoother finds the maximum a posteriori likelihood (MAP) solution for Gaussian process noise and Student's t observation noise, and is extremely robust against outliers, outperforming the recently proposed l1-Laplace smoother in extreme situations (e.g. 50% or more outliers). The second estimator ...
