The alternative, 'better, faster, lighter Java', is what the authors propose as an escape from this creeping complexity that is making big Java developments increasingly costly and problematic. The key to solving the problem is to focus on some of the key virtues that differentiates successful solutions from ugly kludges with high-maintenance costs and snails pace development rates.

Java is object-oriented programming that supports multithreading, so it has the capability to perform several tasks simultaneously. In Java, programs can be compiled into native code at compile time which usually tends to be faster than those translated at run time because of the overhead of the translation process.
