1. BASIC ALGEBRAIC MANIPULATION 1.1 SYMBOLIC REPRESENTATION You should already be familiar with mathematical sums such as:  $12 + 5 = 17$  and  $18 \div 2 = 9$  The division sign  $\div$  can be replaced by a dividing line so we can write  $18 \div 2 = 9$  as  $9 \overline{)18} = 9$  In engineering it is common to use the solidus instead of the dividing line and write  $18/2 = 9$

Historically, engineering mathematics  
consisted mostly of applied analysis,  
most notably: differential equations; real  
and complex analysis (including vector  
and tensor analysis); approximation  
theory (broadly construed, to include  
asymptotic, variational, and perturbative

methods, representations, numerical analysis); Fourier analysis; potential theory; as well as linear algebra and applied probability, outside of analysis.
