Discovering Statistics - The adventure begins

Pearson's correlation coefficient, r (or Pearson's product-moment correlation coefficient to give it its full name), is a standardized measure of the strength of relationship between two variables. It can take any value from -1 (as one variable changes, the other changes in the opposite direction by the same amount), through 0 (as one variable changes the other doesn't change at all), to $+1$ (as one variable changes, the other changes in the same direction by the same amount).
