Cell Transport Review Answer Key Worksheets - Teacher

...

A red blood cell will retain its normal shape in this environment as the amount of water entering the cell is the same as the amount leaving the cell. The concentration of solute in the solution can be greater than the concentration of solute in the cells. This cell is described as being in a hypertonic solution (hyper = greater than normal). In this situation, the red blood cell will appear to shrink as the water flows out of the cell and into the surrounding environment.

5.7: Cell Transport - Biology LibreTexts

There are five key modes of transport in and out of cells; simple

diffusion, facilitated diffusion, osmosis, active transport and co-transport: This is the net movement of molecules from an area of higher concentration to an area of lower concentration until equilibrium is reached. This process does not require ATP.
