Description. In this activity, students use simulations with beads to explore the

concepts in the short film The Making of the Fittest: Natural Selection in Humans about population genetics, the Hardy-Weinberg principle, and how natural selection alters the frequency distribution of heritable traits. Using simple simulations to illustrate these complex concepts provides students with the opportunity to calculate allele and genotype frequencies, graph and interpret data, and design experiments.

The making of the Fittest: Natural Selection and Adaptation

You take a DNA sample from a member of this new population and determine the DNA sequence of a gene known to play a role in fur color. The sequence you get is identical to that of the same gene in another rock pocket mouse population with dark-colored fur that lives on a different patch of volcanic rock.
