Engine Governor Technic - store.fpftech.com
A governor, or speed limiter or controller, is a device used to measure and regulate

the speed of a machine, such as an engine. A classic example is the centrifugal governor , also known as the Watt or fly-ball governor on a reciprocating steam engine, which uses the effect of inertial force on rotating weights driven by the machine output shaft to regulate its speed by altering the input flow of steam.

The stationary movement of the combined engine-governor system is an equilibrium of the system. If everything goes well, then this equilibrium is asymptotically stable,

i.e. a disturbance in the load of the engine will die out and the system returns to stationary movement with a constant desired engine speed.
