### **Segmental Concrete Bridges - Free**

Precast segmental deck construction is used for long bridges where the deck depth is difficult for cast in situ construction. Box girder deck segments are generally used where the segment can be 2m or less deep, between 2.5m and 4m long carrying a deck upto 15m wide are generally used.

### **Precast Segmental Bridge Construction - CalMatters**

A segmental bridge is a bridge built in short sections, i.e., one piece at a time, as opposed to traditional methods that build a bridge in very large sections. The bridge is made of concrete that is either cast-in-place or precast concrete. These bridges are very economical for long spans, especially when access to the construction site is restricted. They are also chosen for their aesthetic appeal.

### **Segmental bridge - Wikipedia**

Precast struts and transverse trusses are sometimes combined in cable-stayed bridges with one central plane of stay cables supporting twin precast segmental box girders, while they are rarely necessary with twin box girders supported at the edges with two planes of stay cables. Precast segmental technology, however, is rarely applied to modern cable-stayed bridges designed for long service life because of the weight of these

structures and the huge number of longitudinal and transverse ...

### **An Overview of Precast Prestressed Segmental Bridges**

Balanced cantilever construction is suited to precast and cast-in-place segmental bridges. Precast segmental construction is addressed to large-scale bridge projects with 50–120-m spans; ground cranes and lifting frames handle the segments with free erection sequences, while self-launching gantries operate linearly from abutment to abutment.
