Summary: The Blinder–Oaxaca decomposition is a statistical method that explains the difference in the means of a dependent variable between two groups by decomposing the gap into that part that is due to differences in the mean values of the independent variable within the groups, on the one hand, and group differences in the effects of the independent variable,

on the other hand.

To illustrate the basic concepts of the Adomian's decomposition method for solving the linear Schrödinger equation, first we rewrite it in the following operator form:

(1.98) $L_t u(x,t) + i L_{xx} u(x,t) = 0$ where the notations $L_t = \partial / \partial t$ and $L_{xx} = \partial^2 / \partial x^2$. Assuming L_t is invertible; hence the inverse operator L_t^{-1} is given by
