 The coelacanths constitute a now-rare order of fish that includes two extant species in the genus *Latimeria*: the West Indian Ocean coelacanth primarily

found near the Comoro Islands off the east coast of Africa and the Indonesian coelacanth. They follow the oldest-known living lineage of *Sarcopterygii*, which means they are more closely related to lungfish and tetrapods than to ray-finned fish. They are found along the coastline of Indonesia and in the Indian Ocean. The West Indian Ocean coelacanth

Coelacanth - Wikipedia

The coelacanth is a rare marine fish that is a living representative of an ancient lineage of formerly common fishes. This and the closely related Indonesian coelacanth (*Latimeria menadoensis*) have several unique physical characteristics that few

Prior to the discovery of living coelacanths in 1938, our only knowledge of the fish came from fossils. Coelacanths are more closely related to tetrapods (four-limbed vertebrates) than to ray-finned fish (which make up the majority

of other living fish species). It has been suggested that coelacanths form a direct evolutionary link between the groups.

Coelacanth Facts, Pictures & Information: An Amazing ...

Like assorted other fish and reptiles, coelacanths are "ovoviviparous." In other words, the female's eggs are fertilized internally and stay in the birth duct until they're ready to hatch. Technically, this type of "live birth" is different from that of placental mammals, in which the developing embryo is attached to the mother via an umbilical cord.
