Multi Functional Materials And Structures

Inspired by biological systems that are inherently multifunctional our research community has successfully deployed several visionary concepts to create a new breed of multifunctional materials and structures, including "autonomic" structures that can sense, diagnose and

respond to external stimuli, "adaptive" structures allowing reconfiguration of shape, mechanical and other functional properties, and "self-sustaining" systems with integrated energy storage and harvesting capabilities.

Multifunctional Materials and Their Impact on Sustainability. Multifunctional materials are the materials that perform multiple functions in a system due to their specific properties. Multifunctional materials can be both naturally existing and specially engineered. For example, some traditional materials that provide, for instance, high mechanical strength can be modified at the nanoscale to attain other properties such as energy absorption, self-healing, etc.
