Cognitive-behavioral Therapy for Impulsive Children *Guilford Press*

Kendall and Braswell have designed and developed specific procedures that can improve children's self-control and reduce their impulsivity. In this second edition, the authors both expand and focus the application of their program, involving parents and teachers to a greater extent, making greater use of hands-on workbook materials, and adapting and implementing procedures for children with a wide range of behavior problems linked to impulsivity. The present edition also provides, in greater detail, descriptions of treatment strategies, in-session therapy materials, case examples, and illustrative transcripts. This book will be of great value to child and family psychologists, social workers, educators, and psychiatrists, as well as parents, pediatricians, classroom teachers, and others who frequently encounter impulsive children. This book also serves as an excellent ancillary text for courses in clinical child psychology, school psychology, educational interventions, applied developmental psychology, and other mental health related classes.

Coping Power

Parent Group Workbook 8-Copy Set *Oxford University Press*

This program is an evidence based intervention for behavioral in pre-adolescent children (grades 5 and 6). Continuing the work of the Fast Track Program, currently under contract, this intervention targets children who are beginning to show signs of severe aggression and social dysfunction at school. Children who begin to exhibit aggression as pre-adolescents are much more likely to have histories of substance abuse, interpersonal violence, and criminal behavior in their adolescence. By targeting these children before their behavior has become extremely dangerous or unmanageable, this program has been proven to reduce the occurrence of these problems, and to improve functioning in school. Studies have shown that children who demonstrate aggressive behaviors have maladaptive coping skills and misperceptions of conflict or threat. This program teaches positive strategies for coping with perceived conflict or threat, as well as an understanding of the participant's feelings and motivations behind inappropriate behaviors. The Coping Power program involves an intervention with aggressive children and a simultaneous program for their parents, to increase positive motivations at home as well as at school. The facilitator's guides include step-by-step instructions for accurately implementing this evidence-based program. This is the corresponding workbook for parents which includes worksheets and monitoring forms to track progress and reinforce the skills learned in the group sessions.

Flexibility within Fidelity

Breathing Life into a Psychological Treatment Manual *Oxford University Press*

Among mental health researchers, there is a consensus that empirically supported treatments (ESTs) have favorable outcomes and that the outcomes are typically better than other approaches. The majority of these are available as therapist manuals, brief books, or other extended volumes. However, among mental health service providers, there is often a view that these manuals and books can be formulaic and rigid, and likely insensitive to individual patient needs or presentations.

With these conflicting perspectives in place, there is a need for accurate communication and reconciliation. Flexibility within Fidelity identifies how effective ESTs can be implemented with both integrity and flexibility. The book is comprised of chapters focusing on specific ESTs for identified problem areas amongst adults and children/adolescents, including anxiety disorders, PTSD, pain management, and depression among others. Chapter authors focus on the specific treatment components that are required to maintain fidelity and the features of the EST which can be applied with flexibility, promoting a personalized implementation. Written in an accessible style featuring in-depth clinical discussions, this book will equip mental health practitioners with the tools to implement ESTs across client presentations.

The treatment is conducted from a developmental perspective and the book contains clinical examples of how to approach youth of varying ages. The authors demonstrate that CAPP can help youth: · Reduce anxiety symptoms by developing an understanding of the emotional meaning of symptoms · Enhance children's skill of reflection and self-observation of one's own and others' motivations (improvement in symptom-specific reflective functioning) · Diminish

use of avoidance, dependence and rigidity by showing that underlying emotions (e.g. guilt, shame, anger), as well as conflicted wishes and desires can be tolerated and understood · Understand fantasies and personal emotional significance surrounding the anxiety symptoms to reduce symptoms' magical qualities and impact on the child The manual provides a description of psychodynamic treatment principles and technique and offers a guide to opening, middle, and termination phases of this psychotherapy. It contains chapters on the historical background of psychodynamic child psychotherapy, on developmental aspects of child psychotherapy, and on the nature of parent involvement in the treatment. It will be useful for clinicians from diverse therapy backgrounds and it will appeal to the student reader, as well as to the experienced clinician.
