Goals and Methods of Surface Analysis. The ultimate goal of surface analysis is to determine the structure and properties of an arbitrary surface with resolution at the level of atomic/molecular layers (or even down to individual atoms/molecules). In practice, surfaces are often disordered at the atomic level, so the structural information has to be interpreted in terms of some averaged and simplified model, which may not represent any specific structure on a real surface.

Biointerface: Introduction to Surface Analysis

Surface analysis, in analytical chemistry, the study of that part of a solid that is in contact with a gas or a vacuum. When two phases of matter are in contact, they form an interface. The term surface is usually reserved for the interface between a solid and a gas or between a solid and a vacuum; the surface is considered to be that part of the solid that interacts with its environment.
