In Chapter 7 we extend the scope of linear algebra further, from vector spaces over elds to modules over rings. Specic rings considered include the ring Z of integers, rings of polynomials, and matrix rings. We discussR- linear maps between twoR-modules, for various ringsR, with an emphasis on commutative rings with unit.

In mathematics, a module is one of the fundamental algebraic structures used in abstract algebra. A module over a ring is a generalization of the notion of vector space over a field, wherein the corresponding scalars are the elements of an arbitrary given ring and a multiplication is defined between elements of the ring and elements of the module. A module taking its scalars from a ring R is called an R-module. Thus, a module, like a vector space, is an additive abelian group; a product is defin

In mathematics, the tensor product of modules is a construction that allows arguments about bilinear maps (e.g. multiplication) to be carried out in terms of linear maps.The module construction is analogous to the construction of the tensor product of vector spaces, but can be carried out for a pair of modules over a commutative ring resulting in a third module, and also for a pair of a right ...

Let R be a ring with 1. An element of the R -module M is called a torsion element if r m = 0 for some nonzero element r ∈ R. The set of torsion

elements is denoted. Tor (M) = { m ∈ M | r m = 0 for some nonzero r ∈ R }. (a) Prove that if R is an integral domain, then Tor (M) is a submodule of M.

Module Theory | Problems in Mathematics

Each undergraduate course of algebra begins with basic notions and results concerning groups, rings, modules and linear algebra. That is, it begins with simple notions and simple results. Our intention was to provide a collection of exercises which cover only the easy part of ring theory, what we have named the "Basics of Ring Theory".

Beginning with standard topics in groups and ring theory, the authors then develop basic module theory, culminating in the fundamental structure theorem for finitely generated modules over a principal ideal domain. They then treat canonical form theory in linear algebra as an application of this fundamental theorem.

In general, if R is a ring and S is a simple module over R, then, by Schur's lemma, the endomorphism ring of S is a division ring; every division ring arises in this fashion from some simple module. Much of linear algebra may be formulated, and remains correct, for modules over a division ring D instead of vector spaces over a field. Doing so it must be specified whether one is considering right or left modules, and some care is needed in properly distinguishing left and right in formulas.
