Best Practices from WisDOT Mega and ARRA Projects

Final Report Submitted to the Wisconsin Department of Transportation

Since 2004 WisDOT has developed a number of new techniques, methods, processes and procedures for management of two new types of transportation projects: "Mega projects" and projects funded through the American Recovery and Reinvestment Act of 2009 (ARRA). However, there has not been a comprehensive evaluation of the processes used to determine their effectiveness and whether they have provided sufficient benefit to be more widely implemented as a department best practice. This research project identifies procedures, standards, and programs used in these projects and evaluated their effectiveness to determine if they have benefits for future use and how they could be adopted by the department. The results will help WisDOT best decide where and when to apply the new techniques and processes developed so as to optimize available resources on future projects.

Topics in Clinical Pharmacology and Therapeutics *Springer Science & Business Media*

Dr. Maronde has performed a major service in bringing together a superb array of scholars and clinicians to discuss not only the basic principles in therapeutics and clinical pharmacology but also the application of those principles to a wide range of clinical problems. Inclusion of chapters on adverse drug reactions, drug overdose, nonmedical prescription drug use, physician prescribing patterns, and the pharmaceutical industry makes this a particularly valuable book for clinicians. It is increasingly important that clinicians be well grounded in the principles of pharmacodynamics and pharmacokinetics because more and more of our patients are aging and cannot be treated as young or middle-aged adults. Elderly patients are liable to either drug overdose or underdose if traditional dosage formulas are followed because of changes in drug metabolism, drug distribution within the body, drug excretion, or changes in receptor site sensitivity. Because the elderly often present with multiple chronic diseases and require a variety of medications, they are more prone to medication errors, drug-drug interactions, and adverse drug reactions. The inclusion of three excellent chapters relating to drug-drug interactions, adverse drug reactions, and drug overdose is most welcome and is a valuable addition to this outstanding text on therapeutics and clinical pharmacology. Adverse drug reactions present a potentially serious problem for any patient for whom drugs are prescribed and particularly for those who must take multiple prescriptions.

Drawdown**The Most Comprehensive Plan Ever Proposed to Reverse Global Warming** *Penguin*

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, *Vox* "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Activities of the Health and Safety Division, Bureau of Mines, United States Department of the Interior**During the War Years, 1941-45****Proceedings****Parenting Matters****Supporting Parents of Children Ages 0-8** *National Academies Press*

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Global Status Report on Road Safety 2018 *World Health Organization*

The Global Status Report on Road Safety 2018, launched by WHO in December 2018, highlights that the number of annual road traffic deaths has reached 1.35 million. Road traffic injuries are now the leading killer of people aged 5-29 years. The burden is disproportionately borne by pedestrians, cyclists and motorcyclists, in particular those living in developing countries. The report suggests that the price paid for mobility is too high, especially because proven measures exist. Drastic action is needed to put these measures in place to meet any future global target that might be set and save lives.

The Progress Principle

Using Small Wins to Ignite Joy, Engagement, and Creativity at Work *Harvard Business Press*

What really sets the best managers above the rest? It's their power to build a cadre of employees who have great inner work lives—consistently positive emotions; strong motivation; and favorable perceptions of the organization, their work, and their colleagues. The worst managers undermine inner work life, often unwittingly. As Teresa Amabile and Steven Kramer explain in *The Progress Principle*, seemingly mundane workday events can make or break employees' inner work lives. But it's forward momentum in meaningful work—progress—that creates the best inner work lives. Through rigorous analysis of nearly 12,000 diary entries provided by 238 employees in 7 companies, the authors explain how managers can foster progress and enhance inner work life every day. The book shows how to remove obstacles to progress, including meaningless tasks and toxic relationships. It also explains how to activate two forces that enable progress: (1) catalysts—events that directly facilitate project work, such as clear goals and autonomy—and (2) nourishers—interpersonal events that uplift workers, including encouragement and demonstrations of respect and collegiality. Brimming with honest examples from the companies studied, *The Progress Principle* equips aspiring and seasoned leaders alike with the insights they need to maximize their people's performance.

Occupational Noise Exposure

Criteria for a Recommended Standard *Createspace Independent Publishing Platform*

In the Occupational Safety and Health Act of 1970, Congress declared that its purpose was to assure, so far as possible, safe and healthful working conditions for every working man and woman and to preserve our human resources. In this Act, the National Institute for Occupational Safety and Health (NIOSH) is charged with recommending occupational safety and health standards and describing exposure concentrations that are safe for various periods of employment—including but not limited to concentrations at which no worker will suffer diminished health, functional capacity, or life expectancy as a result of his or her work experience. By means of criteria documents, NIOSH communicates these recommended standards to regulatory agencies (including the Occupational Safety and Health Administration [OSHA]) and to others in the occupational safety and health community. Criteria documents provide the scientific basis for new occupational safety and health standards. These documents generally contain a critical review of the scientific and technical information available on the prevalence of hazards, the existence of safety and health risks, and the adequacy of control methods. In addition to transmitting these documents to the Department of Labor, NIOSH also distributes them to health professionals in academic institutions, industry, organized labor, public interest groups, and other government agencies. In 1972, NIOSH published *Criteria for a Recommended Standard: Occupational Exposure to Noise*, which provided the basis for a recommended standard to reduce the risk of developing permanent hearing loss as a result of occupational noise exposure [NIOSH 1972]. NIOSH has now evaluated the latest scientific information and has revised some of its previous recommendations. The 1998 recommendations go beyond attempting to conserve hearing by focusing on preventing occupational noise-induced hearing loss (NIHL). This criteria document reevaluates and reaffirms the recommended exposure limit (REL) for occupational noise exposure established by the National Institute for Occupational Safety and Health (NIOSH) in 1972. The REL is 85 decibels, A-weighted, as an 8-hr time-weighted average (85 dBA as an 8-hr TWA). Exposures at or above this level are hazardous. By incorporating the 4000-Hz audiometric frequency into the definition of hearing impairment in the risk assessment, NIOSH has found an 8% excess risk of developing occupational noise-induced hearing loss (NIHL) during a 40-year lifetime exposure at the 85-dBA REL. NIOSH has also found that scientific evidence supports the use of a 3-dB exchange rate for the calculation of TWA exposures to noise. The recommendations in this document go beyond attempts to

conserve hearing by focusing on prevention of occupational NIHL. For workers whose noise exposures equal or exceed 85 dBA, NIOSH recommends a hearing loss prevention program (HLPP) that includes exposure assessment, engineering and administrative controls, proper use of hearing protectors, audiometric evaluation, education and motivation, recordkeeping, and program audits and evaluations. Audiometric evaluation is an important component of an HLPP. To provide early identification of workers with increasing hearing loss, NIOSH has revised the criterion for significant threshold shift to an increase of 15 dB in the hearing threshold level (HTL) at 500, 1000, 2000, 3000, 4000, or 6000 Hz in either ear, as determined by two consecutive tests. To permit timely intervention and prevent further hearing losses in workers whose HTLs have increased because of occupational noise exposure, NIOSH no longer recommends age correction on individual audiograms.

Lu's Basic Toxicology

Fundamentals, Target Organs and Risk Assessment, Fourth Edition *CRC Press*

This classic textbook now enters its forth edition, offering a distillation of decades of research and teaching experience in toxicology. Known all over the world after its translation into six languages, Lu's Basic Toxicology: Fundamentals, Target Organs, and Risk Assessment is a benchmark text that brings clarity and insight into a rapidly evolving subject. Noted for its concise yet broad coverage of the subject, this new edition includes new chapters on over-the counter preparations, lactation and occupational toxicology. In addition, it covers: " The action of chemicals that cause cancer, mutations, congenital malformations and organ or system specific effects " Why chemical target specific organs and systems and how these effects are revealed by laboratory tests " The host and environmental factors that modify these effects " The effects of food additives, pesticides, metals, pollutants in air, water and soil, as well as toxicants encountered in workplaces " The procedures commonly used in assessing risk associated with these chemicals The breadth of this book makes it ideal for students requiring an introduction to toxicology, whether those specializing in toxicology or those from other biomedical disciplines who need a clear and concise overview of the field. The inclusion of separate subject and chemical indexes also makes it a useful shelf reference for more experienced researchers. In Lu's Basic Toxicology, Frank Lu and Sam Kacew have transcribed their vast experience to produce a book which will be an invaluable reference to student and practising toxicologists everywhere.
