Amino acids are not made during protein synthesis. Some
students think that the purpose of protein synthesis is to create
amino acids. However, amino acids are not being made during
translation, they are being used as building blocks to make
proteins. Mutations do not always have drastic or negative

This study shows that the HIV-1 capsid protein, in addition to its structural role, regulates reverse transcription, an essential metabolic process of the virus, by mediating the import of

nucleotides. In addition, host cell metabolites such as inositol phosphates are recruited by the capsid to regulate viral DNA synthesis.
