Optical Thermal Response Of Laser

In this text, scientists provide a detailed description of the physical events that occur when light interacts with tissue. Their work emphasizes the optical response of tissue during treatment procedures or diagnostic applications of

laser light. Supported by numerous illustrations, chapters present methods for estimating tissue optical properties from measurements of reflection and transmission in addition to methods for measuring temperature, thermal properties and rate constants.

Abstract: A Java simulation application was developed to simulate optical and thermal response of laser irradiated tissue by using Monte Carlo and finite difference methods. For light propagation Monte Carlo was preferred according to its high accuracy because a number of photon packets can be launched to increase efficiency.

The optical bandgap is at lower energy than the transport gap. In almost all inorganic semiconductors, such as silicon, gallium arsenide, etc., there is very little interaction between electrons and holes (very small exciton binding energy), and therefore the optical and electronic bandgap are essentially identical, and the distinction between them is ignored.

Band gap - Wikipedia

A continuous-wave (CW) 200 W diode-laser bar with a thermal density of greater than 500 W/cm² can be bonded on a microchannel cooler (MCC) heat sink. Thermal-dissipation capability should be considered in the simulation, as well as how to minimize the "SMILE" value.
